

Corrib Gas Onshore Pipeline

PUBLIC INFORMATION NOTICE

Shell E&P Ireland Limited (SEPI) will continue with construction works relating to the onshore pipeline throughout April. Ongoing civil works to establish the compound at Aughooose will include the construction of internal roads, piling, concrete structures and service installations, import and export of construction materials and associated works. Works to establish a compound at Glengad are ongoing involving the installation of perimeter fencing, construction of temporary working areas, access roads and welfare facilities. Equipment will be mobilised to the Glengad compound to hydrotest and dewater the offshore pipeline. Works on the pipeline wayleave will include the installation of monitoring equipment and site investigation works.

There will be ongoing movements to licensed facilities for the management of construction related materials. This will include the material recovery facility at Tallagh, Belmullet on the L1201.

The approved peak number of daily one-way traffic movements is 236, while the table below contains the estimated average daily one-way movements for the next two months. A map of the local haulage routes is also displayed.

The majority of haulage traffic for this period will be to the construction compounds at Aughooose, Glengad (max 24 one-way HCV movements per day), the pipeline wayleave, the Bellanaboy Bridge Gas Terminal site, Srahmore and other licensed facilities.

Routes	Materials Being Hauled	Projected average number of one-way HCV movements per day	
		April	May
R313 to L1204 to R314 to L1202	Construction equipment and materials, welfare facilities, fencing, stone.	128	75

If you have any comments or queries with regard to our operations, please contact our Corrib Project Information Office in Belmullet on **097 27100** or Corrib Freephone **1800 201 525**.

Dated this 30th day of March 2012.
